

CATHY LEFEBVRE

Senior Software Engineer | AWS, Python, Low-Latency APIs & Data Pipelines
me@cathycodes.com | 678-640-1354 | linkedin.com/in/cathy-codes

TECHNICAL SKILLS

Amazon Web Services: Glue, Lambda, S3, Step Functions, EventBridge, CLI, DMS, Athena, EC2, DynamoDB, Redshift, Kinesis, SNS, SQS, IAM, Secrets Manager

Programming Languages: Python (pandas, Flask, FastAPI), Bash, Java, SQL, Perl, C, HTML

Software/Tools: Git, Jira, VS Code, BitBucket, Microsoft Excel, Terraform, Android Studio, Firebase, Jupyter, Docker

CERTIFICATIONS

AWS Certified Data Engineer – Associate | Issued October 2026

AWS Certified Solutions Architect – Associate | Issued February 2026

AWS Certified Cloud Practitioner - Foundational | Issued January 2026

PROFESSIONAL EXPERIENCE

Senior Data Engineer | Georgia-Pacific

February 2024 – September 2025

- Developed and maintained configuration-based and event-driven data pipelines to orchestrate seamless data movement from diverse enterprise formats into a shared corporate data lake.
- Redesigned a legacy API data acquisition pipeline using asynchronous calls, parallel processing, and configuration-driven architecture, maximizing code reusability and eliminating the need for custom data-source plugins.

Software Engineer | Worthix

October 2022 – July 2023

- Engineered and maintained a FastAPI-based backend system responsible for calculating real-time statistics from enterprise survey data stored in SQL Server.
- Improved development pipeline efficiency, test coverage, and code consistency by establishing standardized tooling and implementing rigorous automated tests.
- Designed and deployed scalable API endpoints to support evolving client product demands.

Python Developer | Booz Allen Hamilton (Contract via The Goal)

October 2021 – October 2022

- Optimized Flask-based backend APIs on the CDC's MVPS Portal Team to streamline the validation, processing, and distribution of critical state-level surveillance data.
- Enhanced background scheduling, multithreading, and database queries (pyodbc/SQL Server), improving overall API responsiveness and service reliability.
- Modernized file-ingestion workflows by migrating legacy Perl processes to Python, integrating automated alerting mechanisms to monitor file load failures across ~75 weekly ingestion feeds.

Junior Software Developer | InductiveHealth Informatics

January 2021 – October 2021

- Contracted with the CDC on the BioSense project to build stable, secure data ingestion and transformation pipelines for real-time analyst access
- Authored a modular Python file-transfer utility with automated PyTest suites, robust logging, and automated failure notifications.

Junior Developer | Anthem (Contract via Randstad)

April 2020 – December 2020

- Secured data transit channels and IAM access between on-premises and cloud environments (AWS S3, Redshift, Snowflake, RDS Aurora, Teradata).
- Built a custom, reusable Python library to unify coding standards, eliminate security vulnerabilities, and streamline deployment across 50+ AWS Glue jobs and Lambda functions.
- Designed real-time streaming architectures transferring data from Kafka through S3 into Snowflake using AWS Lambda and Amazon SQS.

EDUCATION

Georgia Institute of Technology BS in Computer Science

August 2015 – May 2018

Specialization Threads: Intelligence and People

LEADERSHIP & COMMUNITY

Psi Upsilon Fraternity - Executive Council Secretary & Education Committee Chair

July 2024 - Present

Psi Upsilon Society of Georgia - Board Member

December 2022 - January 2024
